

Time: 9:00 AM to 10:15 AM
Question Paper Code: 61

Roll No. of Student's																			
--------------------------	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

Write the question paper code mentioned above on YOUR OMR Answer Sheet (in the space provided), otherwise your Answer Sheet will NOT be evaluated. Note that the same Question Paper Code appears on each page of the question paper.

Instructions to Candidates:

1. Use of mobile phone, smart watch, and iPad during examination is **STRICTLY PROHIBITED**.
2. In addition to this question paper, you are given OMR Answer Sheet along with candidate's copy.
3. On the OMR sheet, make all the entries carefully in the space provided **ONLY** in **BLOCK CAPITALS** as well as by properly darkening the appropriate bubbles.
Incomplete/ incorrect/ carelessly filled information may disqualify your candidature.
4. On the OMR Answer Sheet, use only **BLUE or BLACK BALL POINT PEN** for making entries and filling the bubbles.
5. Your **14-digit roll number and date of birth** entered on the OMR Answer Sheet shall remain your login credentials means login id and password respectively for accessing your performance / result in Indian Olympiad Qualifier in Physics 2021-22 (Part I).
6. Question paper has two parts. In part A1 (Q. No.1 to 24) each question has four alternatives, out of which **only one** is correct. Choose the correct alternative and fill the appropriate bubble, as below.

Q.No.12

a		c	d
---	--	---	---

In part A-2 (Q. No. 25 to 32) each question has four alternatives out of which any number of alternative(s) (1, 2, 3, or 4) may be correct. You have to choose **all** correct alternative(s) and fill the appropriate bubble(s), as shown

Q.No.30

a		c	
---	--	---	--

7. For **Part A-1**, each correct answer carries 3 marks whereas 1 mark will be deducted for each wrong answer. In **Part A-2**, you get 6 marks if all the correct alternatives are marked and no incorrect. No negative marks in this part.
8. Rough work should be done in the space provided. There are **11** printed pages in this paper
9. Use of **non- programmable scientific** calculator is allowed.
10. No candidate should leave the examination hall before the completion of the examination.
11. After submitting answer paper, take away the question paper & Candidate's copy of OMR for your reference.

Please DO NOT make any mark other than filling the appropriate bubbles properly in the space provided on the OMR answer sheet.

OMR answer sheets are evaluated using machine, hence CHANGE OF ENTRY IS NOT ALLOWED. Scratching or overwriting may result in a wrong score.

DO NOT WRITE ON THE BACK SIDE OF THE OMR ANSWER SHEET.

Instructions to Candidates (Continued) :

You may read the following instructions after submitting the answer sheet.

12. Comments/Inquiries/Grievances regarding this question paper, if any, can be shared on the Inquiry/Grievance column on www.iapt.org.in on the specified format till January 22, 2022.
13. The answers/solutions to this question paper will be available on the website: www.iapt.org.in by January 20, 2022.
14. **CERTIFICATES and AWARDS:**
Following certificates are awarded by IAPT to students, successful in the Indian Olympiad Qualifier in Physics 2021-22 (Part I)
- “CENTRE TOP 10 %” To be downloaded from iapt.org.in after 15.03.22
 - “STATE TOP 1 %” Will be dispatched to the examinee
 - “NATIONAL TOP 1 %” Will be dispatched to the examinee
 - “GOLD MEDAL & MERIT CERTIFICATE” to all students who attend OCSC – 2022 at HBCSE Mumbai
Certificate for centre toppers shall be uploaded on iapt.org.in
15. List of students (with centre number and roll number only) having score above MAS will be displayed on the website: www.iapt.org.in by **February 06, 2022** See the **Minimum Admissible Score Clause** on the student’s brochure on the web.
16. List of students eligible for evaluation of IOQP 2021-22 (Part II) shall be displayed on www.iapt.org.in by February 10, 2022.

Physical constants you may need....

Mass of electron $m_e = 9.10 \times 10^{-31} \text{ kg}$	Magnitude of charge on electron $e = 1.60 \times 10^{-19} \text{ C}$
Mass of proton $m_p = 1.67 \times 10^{-27} \text{ kg}$	Permittivity of free space $\epsilon_0 = 8.85 \times 10^{-12} \text{ C}^2 \text{ N}^{-1} \text{ m}^{-2}$
Acceleration due to gravity $g = 9.81 \text{ ms}^{-2}$	Permeability of free space $\mu_0 = 4\pi \times 10^{-7} \text{ Hm}^{-1}$
Universal gravitational constant $G = 6.67 \times 10^{-11} \text{ Nm}^2 \text{ Kg}^{-2}$	Planck’s constant $h = 6.63 \times 10^{-34} \text{ Js}$
Universal gas constant $R = 8.31 \text{ Jmol}^{-1} \text{ K}^{-1}$	Faraday constant = 96,500 Cmol^{-1}
Boltzmann constant $k = 1.38 \times 10^{-23} \text{ JK}^{-1}$	Rydberg constant $R = 1.097 \times 10^7 \text{ m}^{-1}$
Stefan’s constant $\sigma = 5.67 \times 10^{-8} \text{ Wm}^{-2} \text{ K}^{-4}$	Density of water at 4°C , $\rho = 1.0 \times 10^3 \text{ kg m}^{-3}$
Avogadro’s constant $A = 6.023 \times 10^{23} \text{ mol}^{-1}$	Density of mercury $\rho = 13.6 \times 10^3 \text{ kg m}^{-3}$
Speed of light in free space $c = 3.0 \times 10^8 \text{ ms}^{-1}$	Speed of sound in air = 330 ms^{-1}

PHYSICS 2021-22 (Part I) (NSEP 2021 – 22)

Time: 75 Minute

Max. Marks: 120

Attempt All Thirty Two Questions

A – 1

ONLY ONE OUT OF FOUR OPTIONS IS CORRECT. BUBBLE THE CORRECT OPTION.

1. Consider the process of the melting of a spherical ball of ice originally at 0° . Assuming that the heat is being absorbed uniformly through the surface and the rate of absorption is proportional to the instantaneous surface area. Which of the following is true for the radius (r) of the ice ball at any instant of time? Assume that the initial radius of the ice ball at $t = 0$ is $r = R_0$ and that the shape of the ball always remains spherical during melting. Also assume that L and ρ are respectively the latent heat and density of ice at 0°

- (a) radius decreases exponentially with time as $r = R_0 e^{-\frac{kt}{\rho L}}$. Here k is constant
- (b) radius decreases exponentially with time as $r = R_0 e^{-\frac{k\rho t}{2L}}$
- (c) radius of the ice ball decreases with time linearly with a slope $-\frac{k}{\rho L}$
- (d) radius of the ice ball decreases with time linearly with a slope $-\frac{k\rho}{2L}$

2. The work done by the three moles of an ideal gas in the cyclic process ABCD shown in the diagram is approximately. Given that

$$T_1 = 100 \text{ K}, T_2 = 200 \text{ K and}$$

$$T_3 = 600 \text{ K}, T_4 = 300 \text{ K}$$

- (a) 7.5 kJ (b) 5.0 kJ
(c) 2.5 kJ (d) Zero

3. The molar specific heat capacity of a certain gas is expressed as $C = C_V + \alpha \frac{P}{T}$.

The equation of state for the process can be written as (α & A are constant)

- (a) $PV = RT$ (b) $V = \alpha T^2$ (c) $V^2 = \alpha \ln T$ (d) $T = Ae^{\frac{V}{\alpha}}$

4. A metal bar of length ℓ moves with a velocity v parallel to an infinitely long straight wire carrying a current I as shown in the figure. If the nearest end of the perpendicular bar always remains at a distance 2ℓ from the current carrying wire, the potential difference (in volt) between two ends of the moving bar is

- (a) $\frac{\mu_0 I v}{2\pi}$ (b) $\frac{\mu_0 I v}{6\pi}$
(c) $\frac{\mu_0 I v}{2\pi} \ell$ (d) $\frac{\mu_0 I v}{2\pi} \ell$

5. Two point charges $+Q$ each are located at $(0, 0)$ and $(L, 0)$ at a distance L apart on the X -axis. The electric field (E) in the region $0 < x < L$ is best represented by

- (a) Fig. a (b) Fig. b (c) Fig. c (d) Fig. d

6. A long straight wire AB of length L ($L \gg a$, $L \gg b$) and resistance R is connected to a time varying source of emf $V(t)$. The variation of applied emf $V(t)$ with time is shown in Fig. B. A circular metallic loop of radius $r = b$ is placed coplanar with the current carrying wire with its centre at a distance 'a' from the axis of the wire as shown. The induced current in the loop is

- (a) clockwise from 0 to $T/2$ and anticlockwise from $T/2$ to T
 (b) anticlockwise from 0 to $T/2$ and clockwise from $T/2$ to T
 (c) clockwise from 0 to T
 (d) anticlockwise from 0 to T

7. A simple circuit consists of a known resistance $R_A = 2 M\Omega$ and an unknown resistance R_B both in series with a battery of 9 volt and negligible internal resistance. When the voltmeter is connected across the resistance R_A , it measures 3 volt but when the same voltmeter is connected across R_B it reads 4.5 volt. The voltmeter measures 9 V across the battery. Considering that the voltmeter has a finite resistance r , the correct option is

- (a) $R_B = 3M\Omega$ and $r = 6.0M\Omega$ (b) $R_B = 2.5M\Omega$ and $r = 6.0M\Omega$
 (c) $R_B = 4M\Omega$ and $r = 12M\Omega$ (d) $R_B = 4.5M\Omega$ and $r = 6.0M\Omega$

8. The optical powers of the objective and the eyepiece of a compound microscope are 100 D and 20 D respectively. The microscope magnification being equal to 50 when the final image is formed at $d = 25$ cm i.e., the least distance of distinct vision. If the separation between the objective and the eyepiece is increased by 2 cm, the magnification of the microscope will be
- (a) 62 (b) 50 (c) 38 (d) 25

9. A hollow non-conducting cone of base radius $R = 50$ cm and semi vertical angle of 15° has been uniformly charged on its curved surface up to three-fourth of its slant length from base with a surface charge density $\sigma = 2.5 \mu\text{C}/\text{m}^2$. The electric field produced at the location of the vertex of the cone is

(a) $\frac{\sigma \ln 2}{2\epsilon_0}$ (b) $\frac{\sigma \ln 2}{4\epsilon_0}$ (c) $\frac{\sigma \ln 2}{8\epsilon_0}$ (d) $\frac{\sigma \ln 2}{16\epsilon_0}$

10. A freely falling spherical rain drop gathers moisture (maintaining its spherical shape all the way) from the atmosphere at a rate $\frac{dm}{dt} = kt^2$ where t is the time and m is the instantaneous mass of the drop, the constant $k = 12 \text{ gm}/\text{s}^3$. If the drop, of initial mass $m_0 = 2 \text{ gm}$, starts falling from rest, the instantaneous velocity of the drop exactly after 5 second shall be (ignore air friction and air buoyancy)

(a) 12.4 ms^{-1} (b) 49.0 ms^{-1} (c) 122.5 ms^{-1} (d) data insufficient

11. Two planets, each of mass M and radius R are positioned (at rest) in space, with their centres a distance $4R$ apart. You wish to fire a projectile from the surface of one planet to the other. The minimum initial speed for which this may be possible is

(a) $\sqrt{\frac{2GM}{5R}}$ (b) $\sqrt{\frac{2GM}{3R}}$ (c) $\sqrt{\frac{4GM}{3R}}$ (d) $\sqrt{\frac{3GM}{2R}}$

12. A thin uniform metallic rod of length L and radius R rotates with an angular velocity ω in a horizontal plane about a vertical axis passing through one of its ends. The density and the Young's modulus of the material of the rod are ρ and Y respectively. The elongation in its length is

(a) $\frac{\rho \omega^2 L^3}{6Y}$ (b) $\frac{\rho \omega^2 L^3}{3Y}$
 (c) $\frac{\rho \omega^2 RL^2}{2Y}$ (d) $\frac{\rho \omega^2 L^3}{2Y}$

13. Consider a particle of mass m with a total energy E moving in a one dimensional potential field. The potential $V(x)$ is plotted against x in the figure beside. The plot of momentum – position graph of this particle is qualitatively best represented by

All plots are symmetrical about x - axis

- (a) Fig. a (b) Fig. b (c) Fig. c (d) Fig. d

14. Knowing that the parallel currents attract, the inward pressure on the curved surface of a thin walled, long hollow metallic cylinder of radius $R = 50$ cm carrying a current of $i = 2$ amp parallel to its axis distributed uniformly over the entire circumference, is

(a) $2.05 \times 10^{-1} \text{ Nm}^{-2}$ (b) $2.55 \times 10^{-3} \text{ Nm}^{-2}$ (c) $2.05 \times 10^{-5} \text{ Nm}^{-2}$ (d) $2.55 \times 10^{-7} \text{ Nm}^{-2}$

15. Two masses move on a collision path as shown. Before the collision the object with mass $2M$ moves with a speed v making an angle $\theta = \sin^{-1} \frac{3}{5}$ to the x-axis while the object with mass M moves with a speed $\frac{3}{2}v$ making an angle $\phi = \sin^{-1} \frac{4}{5}$ with the x-axis. After the collision the object of mass $2M$ is observed to be moving to the right along the x-axis with a speed of $\frac{4}{5}v$. There are no external forces acting during the collision. The correct option is

- (a) The velocity of mass M , after the collision, is zero.
 (b) The centre of mass is moving along x-axis before the collision.
 (c) The velocity of centre of mass after the collision is $\frac{5}{2}v$
 (d) The total linear momentum of the system before the collision along x - axis is $\frac{5}{6}Mv$
16. A large hemispherical water tank of radius R is filled with water initially upto a height $h = \frac{R}{2}$. The water starts dripping out through a small orifice of cross section area 'a' at its spherical bottom. The time taken to get the tank completely empty (neglect viscosity) is

(a) $t = \frac{19\pi R^2}{60a} \sqrt{\frac{R}{g}}$ (b) $t = \frac{3\pi R^2}{10a} \sqrt{\frac{R}{g}}$
 (c) $t = \frac{17\pi R^2}{60a} \sqrt{\frac{R}{g}}$ (d) $t = \frac{\pi R^2}{4a} \sqrt{\frac{R}{g}}$

17. If Pascal (Pa), the unit of pressure volt (V), the unit of potential and meter (L), the unit of length are taken as fundamental units, the dimensional formula for the permittivity ϵ_0 of free space is expressed as

(a) $\text{Pa}^{-1} \text{V}^2 \text{L}^{-2}$ (b) $\text{Pa}^1 \text{V}^{-2} \text{L}^2$ (c) $\text{Pa}^1 \text{V}^2 \text{L}^{-2}$ (d) $\text{Pa}^{-1} \text{V}^{-2} \text{L}^2$

18. A cycle wheel of mass M and radius R fitted with a siren at a point on its circumference, is mounted with its plane vertical on a horizontal axle at about 3 feet above the ground. An observer stands in the vertical plane of the wheel at 100 m away from the axle of the wheel on a horizontal platform. The siren emits a sound of frequency 1000 Hz and the wheel rotates clockwise with a uniform angular speed $\omega = \pi \text{ rad/sec}$. Initially at $t = 0 \text{ sec}$ the siren is nearest to the observer and moves downwards. The observer records the highest pitch of sound for the first time after (speed of sound in air is 330 ms^{-1})

(a) 0.30 s (b) 1.8 s (c) 2.3 s (d) 9.8 s

19. On a right angled transparent triangular prism ABC, when a ray of light is incident on face AB, parallel to the hypotenuse BC, it emerges out of the prism grazing along the surface AC. If instead the ray is made incident on face AC, parallel to the hypotenuse CB it gets totally reflected on face AB. The refractive index μ of the material of the prism is

(a) $\mu > \sqrt{2}$ (b) $\sqrt{2} > \mu > \sqrt{\frac{3}{2}}$ (c) $\sqrt{3} > \mu > \sqrt{2}$ (d) $\mu < \sqrt{\frac{3}{2}}$

20. A circular disc of radius $R = 10 \text{ cm}$ is uniformly rolling on a horizontal surface with a velocity $v = 4 \text{ ms}^{-1}$ of centre of mass without slipping, the time taken by the disc to have the speed of point A (which lies on the circumference) equal to the present speed of point B (point B lies midway between centre and the point A) is

(a) $t = 0.025 \text{ s}$ (b) $t = 0.036 \text{ s}$
(c) $t = 0.046 \text{ s}$ (d) $t = 0.064 \text{ s}$

21. As shown in the figure, a particle of mass $m = 10^{-10} \text{ kg}$, moving with velocity $v_0 = 10^5 \text{ m/s}$ approaches a stationary fixed target with impact parameter b from a large distance. If the fixed rigid target has a core with repulsive central force $F(r) = \frac{K}{r^3}$ where constant $K > 0$ and the particle scatters elastically. The closest distance of approach (if numerically $K = b^2$) is

(a) b (b) $b\sqrt{2}$ (c) $b\sqrt{3}$ (d) $2b$

22. If the specific activity of C^{14} nuclide in a certain ancient wooden toy is known to be $\frac{3}{5}$ of that in a recently fallen tree of the same class, the age of the ancient wooden toy is (The half life of C^{14} is 5570 years)

(a) 5570 years (b) 4105 years (c) 3342 years (d) 2785 years

In questions 23 and 24 mark your answer as

- (a) If statement I is true and statement II is true and also if the statement II is a correct explanation of statement I
- (b) If statement I is true and statement II is true but the statement II is a not a correct explanation of statement I
- (c) If statement I is true but the statement II is false
- (d) If statement I is false but statement II is true

23. Statement I: Work done in bringing a charge q from infinity to the center of a uniformly charged non – conducting solid sphere of radius R (with a total charge Q) is zero.

Statement II: The potential difference between the Centre and the surface of the uniformly charged non – conducting solid sphere of radius R (with a total charge Q)

$$\text{is } \frac{1}{4\pi\epsilon_0} \times \frac{Q}{2R}.$$

24. Statement I: The current flowing through a p-n junction is more in forward bias than that in the reverse bias.

Statement II: The diffusion current, dominant in forward bias, is more than the drift current, dominant in the reverse bias.

A - 2

ANY NUMBER OF OPTIONS 4, 3, 2 or 1 MAY BE CORRECT
MARKS WILL BE AWARDED ONLY IF ALL THE CORRECT OPTIONS ARE BUBBLED

25. A simple pendulum consisting of a small bob of mass m attached to a massless inextensible string of length ℓ , hanging vertically from the ceiling, is oscillating in a vertical plane with an angular amplitude θ_m such that the maximum tension in its string is three times the minimum tension in the string i.e., $T_{\max} = 3T_{\min}$. The correct option(s) is/are
- (a) The maximum tension in the string is $T_{\max} = mg(3 - 2\cos\theta_m)$
- (b) The maximum tension in the string is $T_{\max} = \frac{9}{5}mg$
- (c) The maximum velocity of the bob on its way is $v_{\max} = 3.96 \text{ ms}^{-1}$
- (d) The angular amplitude θ_m lies in the range $\frac{\pi}{4} < \theta_m < \frac{\pi}{3}$
26. Two small masses m and M lie on a large horizontal frictionless circular track of radius R . The two masses are free to slide on the track but constrained to move along a circle. Initially the two masses are tied by a thread with a compressed spring between them (spring of negligible length being attached with none of the two masses). The compressed spring stores a potential energy U_0 . At a certain time $t = 0$ the thread is burnt and the two masses are released to run opposite to each other leaving the spring behind. The total mechanical energy remaining conserved. On the circular track the two masses make a head on perfectly elastic collision. Take $M = 2m$ for all calculations. Which of the following option(s) is / are correct?
- (a) The angle turned by mass m before the collision is $\theta = 4\frac{\pi}{3}$
- (b) The velocity of mass m on the track is $u = \sqrt{\frac{4U_0}{3m}}$
- (c) The time taken to collide for the first time is $t_1 = 2\pi R \sqrt{\frac{m}{3U_0}}$
- (d) The time taken for the second collision is $t_2 = 2\pi R \sqrt{\frac{2m}{3U_0}}$
27. The electric field component of an electromagnetic wave is expressed as $E = (3j + bk) \times 10^{-3} \sin[10^7(x + 2y + 3z - \beta t)]$ in SI units. Taking $c = 3 \times 10^8 \text{ ms}^{-1}$ as the speed of electromagnetic wave in vacuum, choose the correct option(s)
- (a) The value of constant beta is $\beta = 3 \times 10^8 \times \sqrt{14}$
- (b) The value of constant b is $b = 2$.
- (c) The average energy density of the em wave is $U = 6.5 \times 10^{-6} \epsilon_0$ in SI units.
- (d) The amplitude of magnetic field is $B = 1.20 \times 10^{-11} \text{ Tesla}$

28. A parallel beam of light is made incident (as shown) on the flat diametric plane of a transparent semi-circular thin sheet of thickness t ($t \ll R$) of refractive index $\mu = \sqrt{2}$ at an angle of 45° . As a result of refraction, the light enters the semi-circular sheet and comes out at its curved surface.

- (a) Light rays come out at the curved surface for values of θ in the range $75^\circ \leq \theta \leq 165^\circ$.
- (b) The range of angle θ is independent of the angle of incidence.
- (c) The range of angle θ depends on the refractive index of the material
- (d) All the emergent rays of light shall cross the line OP which is a refracted ray at $\theta = 120^\circ$
Here θ is the angle between the vertical diameter AB and the concerned radius of the semicircular sheet of radius R.
29. A certain rod of uniform area of cross section A ($A = 1.0 \text{ cm}^2$) with its length = 2 m is thermally insulated on its lateral surface. The thermal conductivity (K) of the material of the rod varies with temperature T as $K = \frac{\alpha}{T}$ where α is a constant. The two ends of the rod are maintained at temperature of $T_1 = 90^\circ \text{ C}$ and $T_2 = 10^\circ \text{ C}$. The correct option(s) is /are
- (a) The temperature at 50 cm from the colder end is 17.32° C
- (b) The temperature at 50 cm from the hotter end is 51.96° C
- (c) The rate of heat flow per unit area of cross section of the rod is 1.1α in SI units.
- (d) The temperature gradient is numerically higher near the hot end compare to that near the cold end.
30. Positronium is a short-lived ($\approx 10^{-9}\text{s}$) bound state of an electron and a positron (a positively charged particle with mass and charge equal (in magnitude) to an electron) revolving round their common centre of mass. If E_0 , v_0 and a_0 are respectively the ground state energy, the orbital speed of electron in first orbit and the radius of the first ($n = 1$) Bohr orbit for Hydrogen atom, the corresponding quantities E , v and a for the positronium are

- (a) $E = \frac{E_0}{2}$ (b) $a = a_0$ (c) $a = 2a_0$ (d) $E = E_0, v = v_0, a = a_0$

31. A thin double convex lens of radii of curvature $R_1 = 20$ cm and $R_2 = 60$ cm is made-up of a transparent material of refractive index $\mu = 1.5$. Choose the correct option(s)
- (a) The focal length of the lens is $f = 30$ cm when in air.
 - (b) The lens behaves as a concave mirror of focal length $f_M = 10$ cm when silvered on the surface of radius $R_2 = 60$ cm
 - (c) The lens behave as a concave lens (diverging lens) if the image space beyond $R_2 = 60$ cm radius surface is filled with a transparent liquid of refractive index $\mu = \frac{5}{3}$. The object space prior to the surface of radius $R_1 = 20$ cm is air.
 - (d) A beam of rays incident parallel to principal axis focuses at 48 cm behind the lens if water $\left(\mu = \frac{4}{3}\right)$ fills the entire space behind the surface of radius $R_2 = 60$ cm. The object space prior to the surface of radius $R_1 = 20$ cm is air.
32. A thick hollow cylinder of height h and inner and outer radii a and b ($b > a$) made up of a poorly conducting material of resistivity ρ lies coaxially inside a long solenoid at its middle. The radius of the solenoid is larger than b . Throughout the interior of the solenoid, a uniform time varying magnetic field $B = \beta t$ is produced parallel to solenoid axis. Here β is a constant. In this time varying magnetic field
- (a) the emf induced at a certain radius r ($a < r < b$) in the hollow cylinder is $\pi r^2 \beta$
 - (b) the induced current circulating in the thick hollow cylinder between radii a and b is

$$i = \frac{\beta h}{4\rho} (b^2 - a^2)$$
 - (c) the resistance offered to the circulation of current by the thick hollow cylinder is

$$R = \frac{2\pi\rho}{h \times \ln \frac{b}{a}}$$
 - (d) no electric field is detectable outside the solenoid.

ROUGH WORK
